Education

University of The District of Columbia, Bachelor of Science in Computer Science Aug 2022 – Present

- GPA: 3.6/4.0
- **Coursework:** Advanced Object-Oriented Programming, Data Structures, Web Page Development
- **Awards:** DC-UP Scholar (Aug 2022 - Present), Awarded for maintaining an above 3.0 GPA and continuously being enrolled in 12 or more credits a semester

Columbia Heights Educational Campus Aug 2018 – June 2022

- GPA: 3.68/4.0
- **Seal of Biliteracy:** Awarded for outstanding academic achievement in the English and Spanish languages

Experience

Student Intern, Trinity Washington University – Remote Summer 2021

- Further developed foundational programming concepts and key skills in Python, such as functions, loops, problem-solving, and algorithm implementation.
- Developed teamwork skills by serving as both a tester and developer on a final group project that provided the framework for project planning and effectively delivering programming projects.
- Engaged with mentors that helped translate programming fundamentals into practice through a project that reworked and improved a maze game using functions, loops, and decision-making logic to create interactive proximity-based visual feedback.

Skills

Languages

- Python
- Java
- JavaScript

Technologies/Tools

- HTML, CSS
- Linux/Unix
- Git

Projects

Personal Portfolio <https://github.com/Daniel-DeLaCruz908/daniel-portfolio>

- Built a personal website using HTML, CSS, and JS that highlights my skills and achievements.
- Tools Used: HTML, CSS, JavaScript

Algorithm Visualizer <https://github.com/Daniel-DeLaCruz908/dsa-visualizer>

- Built a web app that allows users to visually understand different data structures and algorithms using HTML, CSS, and JavaScript.
- Tools Used: HTML, CSS, JavaScript, React

Interests

PC Building

- At age 15, I built my first personal computer, sparking my interest in the world of computing. Since then, I have helped friends build their own systems and have rebuilt mine multiple times. Through this hands-on experience, I developed a deeper understanding of computer hardware and reinforced the concepts I was learning in lectures.

Music Production/YouTube

- My interest in music production began in high school with the software FL Studio and has grown into a lasting passion that I continue to pursue in my free time. One day, I hope to merge this creative interest with computer science by using my knowledge of software development to develop my own VST plugins.
- Simultaneously, I started to publish my beats on YouTube and was able to garner over a million views total, demonstrating a proficiency in understanding the analytics provided by YouTube, allowing me to keep viewers engaged and returning.
